TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript, HTML, CSS, TypeScript

Frameworks: React, Node.js/Express, Spring Boot, Angular

Developer Tools: Git, VS Code, PyCharm, IntelliJ, Eclipse

EDUCATION

Vellore Institute Of Technology, Vellore

Bachelor of Technology in Computer Science and Engineering [8.78]

Vellore, Tamil Nadu

Sept, 2021 – May, 2025

EXPERIENCE

System Engineer

Tata Consultancy Services

Sept, 2025 – Present

Chennai, Tamil Nadu

- Engineered a full-stack hospital management system using react and node.js, optimizing appointment scheduling and reducing manual slot management time.
- Implemented secure RestAPIs with token-based authentication, enabling seamless data flow between doctor-facing modules and patient booking interfaces.
- Strengthened technical credibility by earning HackerRank certification based on Java and RestAPI basics, validating skills in programming logic, problem-solving, and core development concepts.

Software Engineer Intern

Prodapt

July, 2025 – Sept, 2025

Chennai, Tamil Nadu

- Developed modular, responsive web components using javascript and react, focusing on clean code practices and efficient domain manipulation.
- Built JavaScript and web-based projects, applying hands-on experience with problem-solving, modular coding, and responsive UI development.

IT Intern

Taghleef Industries

Sept, 2023 – Nov, 2023

Sohar, Oman

- Worked extensively to contribute to the design, development, and optimization of ETL (Extract, Transform, Load) pipelines, ensuring efficient data flow, accuracy, and reliability across key organizational systems.
- Gained in-depth knowledge of organizational security by working extensively with Microsoft technologies and understanding their security architecture and operational workflows.

PROJECTS

ExplainGPT | *TypeScript, Python, Jupyter*

May, 2025

- Built a full-stack tool to explore and visualize the internal behaviour of large language models, enabling interactive token-by-token explanations of generated text for deeper model interpretability.
- Enhanced explainability by building features such as token probability heatmaps, prompt-response breakdowns, and visualization utilities, giving developers, students, and researchers a hands-on tool to understand model behavior beyond simple output generation.

Hospital Management System | *React, Node.js, Express, TypeScript*

Nov, 2025

- Developed a doctor-facing scheduling and appointment management module, featuring slot creation, calendar visualization, appointment filtering, pagination, and real-time status updates and patient-facing appointment booking system.
- Integrated secure authentication, token-based routing, and end-to-end API communication using Axios, enabling seamless doctor workflows for managing schedules, appointments, and leave requests.

EXTRACURRICULAR

ic-ETITE '24 | *Student Coordinator*

Feb, 2024

- Organized the International Conference on Emerging Trends in Information Technology and Engineering under IEEE, attracting over 2000 participants from 15+ countries and featuring 30+ expert speakers.
